

Day & Ross Freight

Application Programming Interface (API)

What Is Application Programming Interface (API)?

API is a set of resources and tools that allow two applications to communicate with each other; in this case, API allows your website or business software to interact and work with the Day & Ross Freight system. It means that you and your customers can get all the shipping information you need without leaving your website.

Day & Ross Freight API Web Services

Day & Ross Freight offers you the capability to directly integrate your website or cloud application via APIs and access key functionalities that are only offered through our website. This integration will enable you to offer a seamless user experience to your customers.

Day & Ross offers the following major API Web Services:

Create a Shipment

Create a shipment with an assigned tracking number and also create a pick-up request.

Get a Domestic Quote

Retrieve a rate for a specific Canadian lane.

Get a U.S. Quote

Create a quote for a US shipment.

Get POD Images

Retrieve POD images for shipments.

Get Shipment Information

Retrieve shipment status information.

API Set-up Requirements

To set up API Web Service with Day & Ross Freight, you will need the following:

- A My Day & Ross account and password.
- An existing contract/tariff for the applicable account.
- The set-up instructions provided in a Word document.

Your Benefits

Getting access to shipping information without leaving your website enables you to operate in a more dynamic environment that streamlines your processes.

Higher order accuracy

Better information access

Improved customer service

Increased processing speed

Enhanced visibility
